Skills

- **Application Security:** SAST, SCA, secure code review, vulnerability validation, DevSecOps, web application penetration testing, OWASP Top 10
- **Security Tools:** Semgrep, Burp Suite, Microsoft Defender, AWS Inspector, Intune, Nmap, Splunk
- **AI & Security Automation:** LLM integration (Llama 3, Ollama), Python-based security tooling, automated vulnerability triage, AI-assisted alert triage
- **Cloud Security:** AWS, Microsoft Defender Secure Score
- **Programming & Scripting:** Python, JavaScript, Bash
- **Networking & Systems:** TCP/IP, DNS, HTTP/S, firewalls, IDS/IPS, authentication and authorization
- **Security Frameworks:** MITRE ATT&CK, NIST CSF

Experience

Toyota Insurance Management Solutions — Application Security Engineer Intern (June 2026 – Present)

- Integrated Semgrep SAST into Bitbucket as part of Phase 1 of a Secure SDLC program, enabling automated static analysis on every code push across development teams
- Evaluated and benchmarked SAST/SCA tooling (Semgrep, Snyk, Checkmarx) against DVWA to assess detection coverage and false positive rates, and tested Semgrep using a Bitbucket repository
- Triageed vulnerability findings from AWS Inspector, assessed severity, and coordinated remediation assignments directly with developers to drive closure
- Improved Microsoft Defender Secure Score by identifying and remediating security misconfigurations across the environment using Defender and Intune

Investment Planning Counsel - Web Coordinator (August 2022 - Feb 2024)

- Built and/or maintained over 100 new client advisor websites using CSS, HTML, and JavaScript, and using existing CMS templates

Cognizant Technology Solutions - Senior Process Executive (November 2017 - July 2020)

- Flagged integrity issues and contributed to ad policy enforcement
- Audited ad landing pages for content safety and spam control

Projects

- **AI-Assisted Web Application Penetration Test**
 - Conducted a web application penetration test against OWASP Juice Shop using Burp Suite, exploiting SQL injection and JWT vulnerabilities, and built a Python tool using a local LLM to auto-generate structured vulnerability reports with severity ratings and remediation steps.
- **AI-Powered SOC Alert Triage System**
 - Built a Python pipeline that enriches source IPs against AbuseIPDB in real time and deploys Llama 3 to auto-generate investigation summaries mapped to MITRE ATT&CK techniques
- **Serverless AWS Security-Aware Application**
 - Built a full-stack serverless application on AWS using Lambda, API Gateway, DynamoDB, and S3 with IAM least-privilege controls, CloudWatch monitoring, and role-based access — used as a Semgrep scan target to validate SAST detection in a realistic codebase
- **CloudTrail Threat Detection**
 - Developed a Python script to detect high-risk AWS CloudTrail activity, including unauthorized IAM access and StopLogging events, and map findings to MITRE ATT&CK techniques.

Education

- MS in Computer Science – Cybersecurity, January 2025 - Present, GPA: 3.96
Sofia University
- PG Certificate In Software Quality Assurance and Test Engineering, April 2022 & PG Certificate In Computer Applications Development, April 2021
Conestoga College Institute of Technology And Advanced Learning
- Bachelor's In Electronics & Communications Engineering, May 2017
Indraprastha University
